

Technical Handbook 2008–2009

Thermal Controls

Smart heat for comfort and safety

Smart heat for comfort and safety

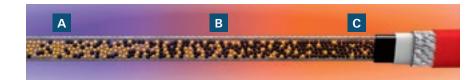

As the world leader in heat-tracing systems, Tyco Thermal Controls has the system that you need from pipe-freezing prevention or maintaining fluid temperatures, to melting snow and heating floors. After 35 years with unrivalled versatility and smart systems, Raychem's self-regulating cable technology still remains at the forefront in heat-tracing solutions. For commercial or residential applications, new construction or renovation, our smart solutions will perform perfectly for greater comfort and safety.

The heart of our solutions

In 1970, Raychem first developed and launched self-regulating electric heating cables.

The cable delivers the right amount of heat exactly when and where it is needed. As the temperature drops, more heat is produced. Conversely, as the temperature rises, less heat is produced. But there are many more benefits:

- The smart cables can be overlapped without any risk of overheating.
- The heating cables can be cut to length 'in the field'. This means additional flexibility when plans do not correspond to the "real life" situation on site.
- The length of pipe corresponds to the length of cable that you need.

Cold ambient = High power output

If the temperature in the immediate vicinity of the self-regulating heating cable is cold, the heat output from the heating cable is increased. The polymeric core of the cable contracts, which creates many electrical paths across the integrated carbon particles.

Warm ambient = Low power output

In response to a warmer environment, the heat output of the self-regulating cable is reduced. The polymeric core of the cable expands, reducing the electrical paths.

Hot ambient = Virtually no output

If the temperature in the environment of the self-regulating heating cable reaches a high temperature, the heat output is minimal. Due to the maximum expansion of the polymeric core of the cable, most of the electrical paths are broken.

Tested and qualified

- Stringent production monitoring
- Approved BS 6351 (IEC 60800)
- VDE approved
- CE marked

Member of the European Radiant Floor Heating Association e.v.

Our products satisfy the
 requirements of the relevant
 European Directives.

Robust construction

 Long service life assured through electrical polyolefin or fluorpolymer insulation

Life time

 Intensive tests according to recognized scientific procedures. Results: self-regulating heating cables have a service life of at least 20 years.

Raychem Smart Services

It's not only the cable!

The combination of a self-regulating heating cable and a smart control unit allows for dynamic management of the heating cable's power output dependant on parameters such as ambient temperature and moisture. These will help you and your customers to comply with today's building regulations on energy savings. A complete Raychem system can result in energy savings of up to 80%!

Our control units (e.g. HWAT-ECO) are designed for easy set-up and operation. They are easy to access for fast wiring. Ergonomic buttons, intuitive menudriven operation and pre-installed programmes allow for quick set-up.

Specific connection systems have been designed and configured to be fully compatible with our heating cables.

The RayClic connection system cuts installation time by 80%. Inserting the stripped cable into the module and tightening a few screws is all it takes.

Raychem offers a set of tools and services that aim to simplify the professional's life. Not only do we offer the best quality products, we also support them with unrivalled services.

A well-oiled customer service centre

- Multi-lingual customer service representatives to answer all your questions
- Fast order handling & shipment Europe-wide
- Free documentation service

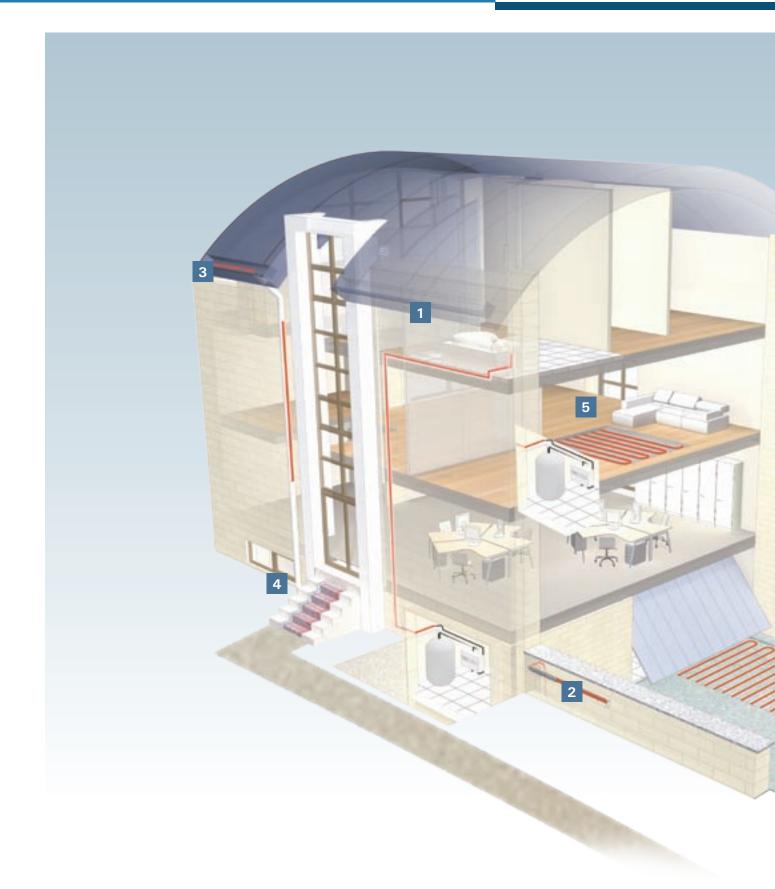

Large technical support team

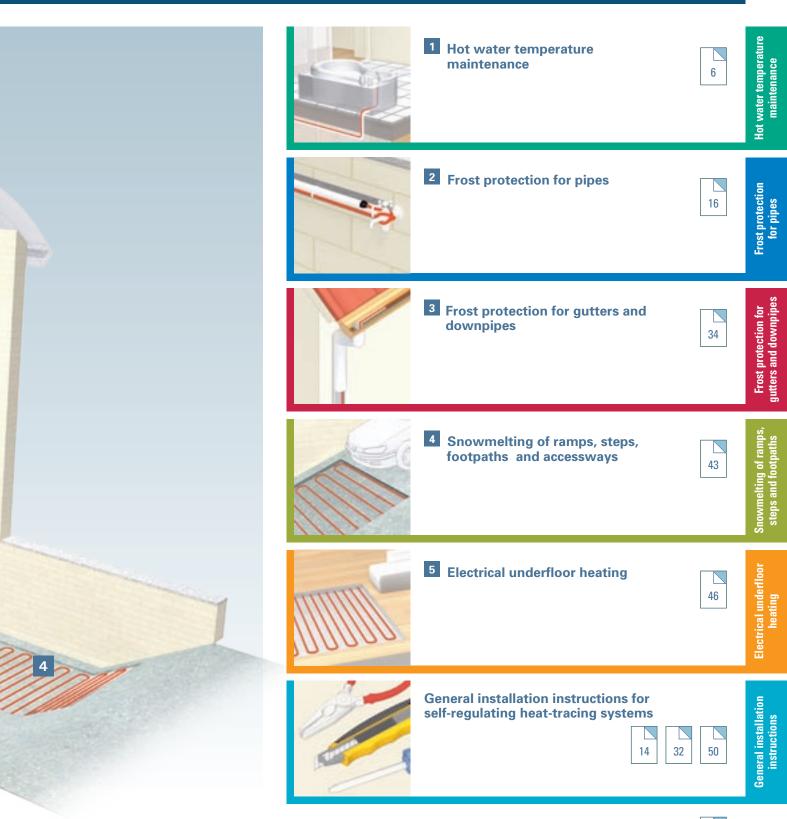

- "On demand" technical advice
- Free designs and quotations
- Direct support to specifiers and installers
- Training support on request
- Complete after-sales service
- Also for non-standard applications our team can assist you in finding the right heating solution. Do not hesitate to get in touch with us. Free phone 0800 96 90 13 or Free fax 0800 96 86 24.

Our website provides you with all information – from product selection to downloadable installation manuals.

Overview of applications

Technical data – Choice of accessories

Hot water temperature maintenance

Providing the comfort of instant hot water is the key requirement of any modern hot water system. The Raychem single-pipe system keeps water at the right temperature in a building's water distribution pipe work. The intelligent system first keeps the investment cost low and then it operates economically and efficiently.

A hygienic system

Less water volume and less heat loss in the pipe work assure for less bacteriological problems.

Gel-filled end seal (RayClic-E-02)

Heating cable (HWAT-L, M or R)

4-way connection (RayClic-X-02)

Power connection (RayClic-CE-02)

Sensor HWAT-ECO (incl.)

Residual current device (rcd) (30 mA) Circuit-breaker (C type)

Temperature control unit (HWAT-ECO)

A flexible and space-saving system

The space requirement for pipes has been reduced because there are no return pipes. Risers, shafts and openings can be minimised freeing space for other services.

Low investment costs

The heating cable is simply fixed on the supply pipe. There is no need for return pipe work, valves or pumps, nor for complex design and balancing work associated with return systems.

Lower power consumption

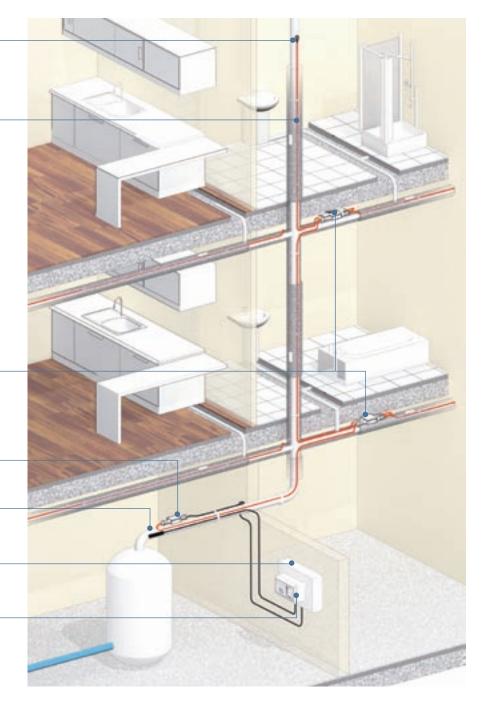

The heat loss in the system is lower as only the heat loss from the feed pipe (and not from the return pipe) is to be compensated for. There is also no power requirement for circulation pumps.

The single-pipe system can be used with a smaller boiler and as there is no cold return water coming in the boiler, the heat-up of the water is more efficient.

The intelligent HWAT-ECO control unit saves power e.g. it can lower the temperature or switch off the during water consumption peaks.

No maintenance costs

The system has no mechanical parts such as a recirculation pump or control valves. There are no parts to wear out.

Design guide, control units and accessories

1. Heating cable selection

Optimum water temperature maintenance for single family houses, flats, offices, hotels, hospitals, convalescent homes, sports centres, ...

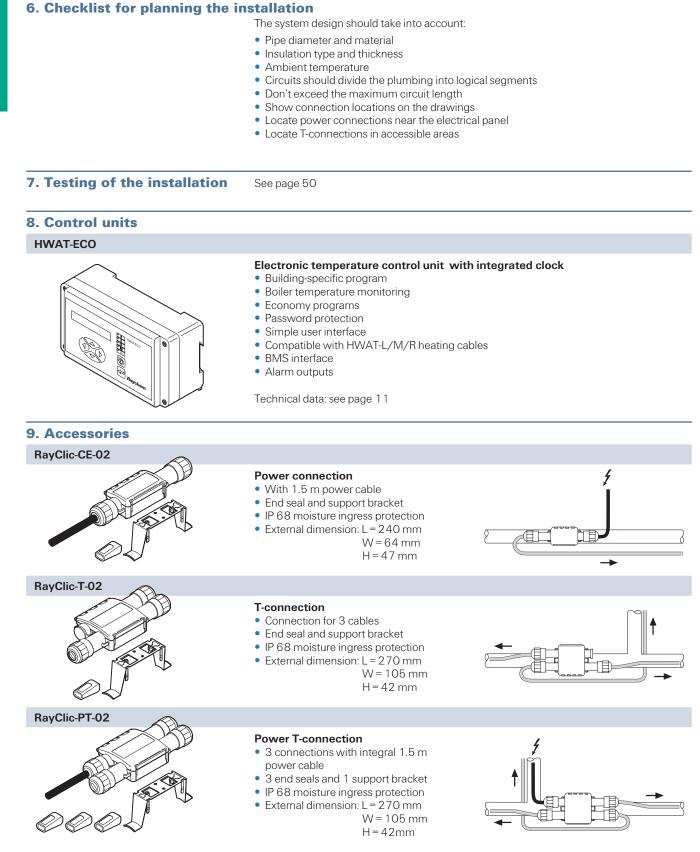

Heating cable type	HWAT-L	HWAT-M	HWAT-R
Power output	7W/m at 45°C	9 W∕m at 55°C	12 W/m at 70°C
Max. exposure temperature	65°C	65°C	80°C
Outer jacket colour	yellow	orange	red
Control unit HWAT-ECO	-	recommended for enhanced energy - efficiency	essential
Legionella prevention			Possibility of thermal legionella prevention up

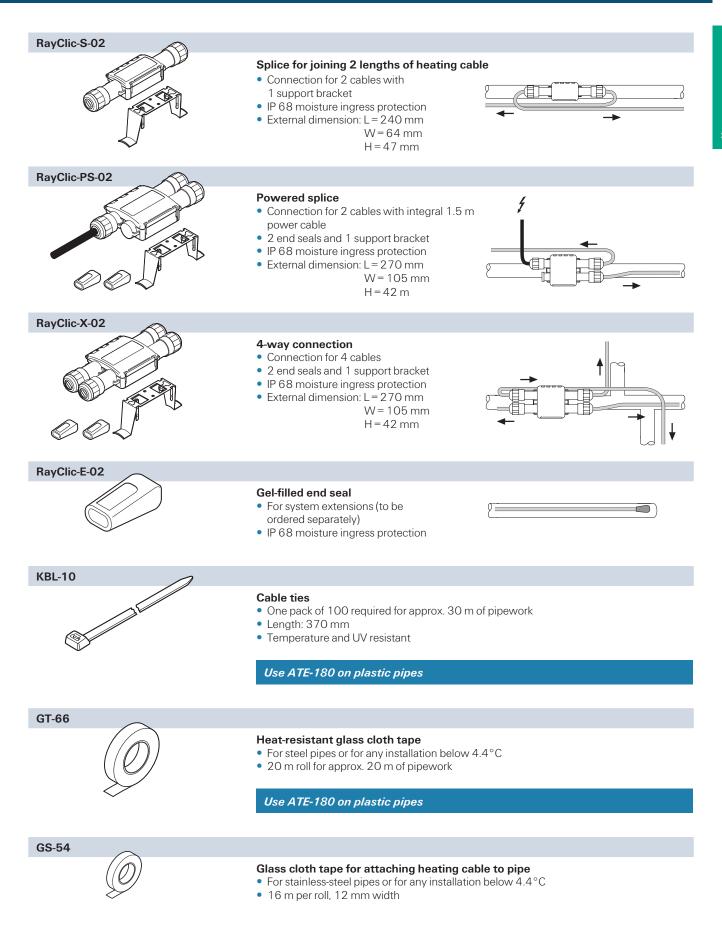

to the draw-off points

2. Composition of the HWAT-L/M/R heating cable

	 Copper conductor (1.2 mm²) Self-regulating heating element Modified polyolefin insulation Aluminium foil wrap Protective tinned copper braid Modified polyolefin protective outer jacket. Technical data: see page 53							
3. Heating cable length	 The heating cable is installed in a straight line on the pipework The heating cable can be traced right up to the draw-off points Total length of pipe to be traced + approx. 0.3 m per connection + approx. 1.0 m per T-connection + approx. 1.2 m per 4-way connection = required heating cable length 							
4. Insulation thicknesses	Pipe size (mm)	15 2	2 28	35	42	54		
	Insulation thickness (mm)	20 2	20 25	30	40	50		
	Ambient temperature: 18°C Thermal conductivity λ = 0.035 W/(m.K) For other thermal conductivity insulation materials, contact your Tyco Thermal Controls representative.							
5. Electrical protection	 The total length of heating cable determines the number and size of the circuit breakers Residual current device (rcd): 30 mA required Power cabling for the heating cables according to local regulations The power connection must be carried out by an approved electrical installer Circuit-breaker to BSEN 60898 (type C): the maximum length of the heating circuit is based on a minimum start-up temperature of +12°C, 230 VAC.							
		HWAT-L	HW	AT-M	HWA	HWAT-R		
	10 A	80 m	50 r	n	50 m			
	13 A	110 m	65 r	n	65 m			
	16 A	140 m	80 r	n	80 m			
	20 A	180 m	100) m	100 n	ก

Draduat description	
Product description	HWAT-ECO
Use	Only for HWAT-L/M/R heating cables
Selectable maintain temperature	37°C to 65°C in max. 48 timer blocs per day
Operating voltage	230 VAC (+10%, -10%), 50 Hz
Switching capacity	20 A / AC 230V
Internal power consumption	2,5 W
Circuit breaker	Max. 20 A, C-Characteristic
Power cable section entry	1.5 - 4 mm ² for fixed wiring only
Auxiliary cable section entry	Up to 16 AWG (1.3 mm ²)
Weight	880 g
Mounting options	Wall mount with 2 screws or DIN rail
Cable glands (entries)	2 x M20 and 1 x PG13.5 with 3 inputs for external wires of 3-5 mm
Protection level	IP 54
Ambient temperature	0°C to 40°C
Housing material	ABS
Internal temperature alarm	85°C
Master/slave cable	2-wire twisted pair shielded, max. 1.3 mm ² core and insulation of 500 V
Master/Slave	Master is selectable in the unit, up to 8 slaves can be connected
BMS interface	0 - 10 VDC
Alarm relay contacts	Max. 24VDC or 24 VAC, 1 A, SPDT voltage free
Boiler temperature sensor	PTC KTY 81-210 or PT 100
Power correction factor	60% to 140% (fine tuning of maintained temperature)
Clock back-up time	Min. 1 year with lithium battery CR2025 (3V)
Clock accuracy	±10 minutes per year
Real time clock	Automatic summer/winter time and leap year correction
Parameters stored in non-volatile	All parameters, except date and time memory
Approval	VDE according to EN 60730
EMC	According to EN 50081-1/2 for emission and EN 50082-1/2 for immunity

Raychem requires the use of a 30 mA residual current device and a C-Characteristic circuit breaker to provide maximum safety and protection from fire.

The unit complies with IEC1000-3-3 (flicker) if installed according to part 3 of VDE 0838. To avoid flicker install the unit in such a way that at the current value of the systems start-up temperature (max. 20 A per heating circuit) the voltage drop does not exceed 1% at the power supply of the lightning apparatus (normally subpanel).

Program

The HWAT-ECO has 7 different building specific time/temperature programs. These programs are based on our long experience for optimum comfort and energy saving. For user specific changes in the programming, the Edit timer program can be used.

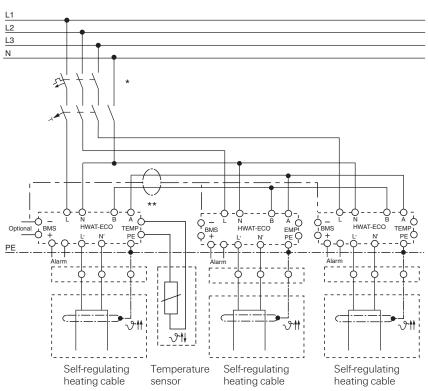

Program name	Building type
Program O	Constant temperature (±55°C)
Program 1	Apartment block
Program 2	Prison / Barracks
Program 3	Hospital
Program 4	Hotel
Program 5	Sports centre / Swimming pool
Program 6	Office

In addition, user specific programs can be created

Temperature can be varied in 1/2 h blocks to any desired temperature between: OFF, economy t°, maintain t° and legionella prevention (100% powered, increased risk of scalding)

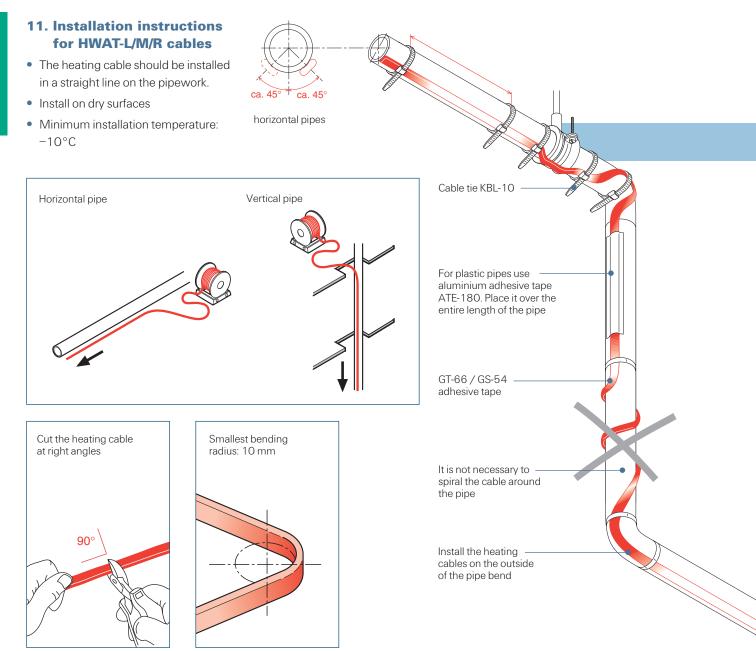

Wiring diagram for HWAT-L / HWAT-M / HWAT-R with HWAT-ECO temperature control unit

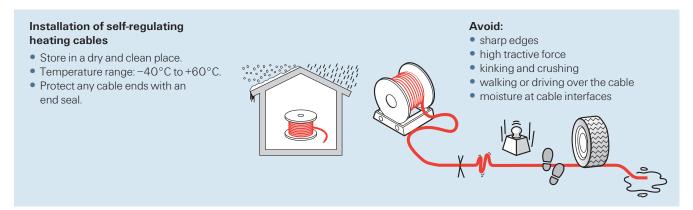

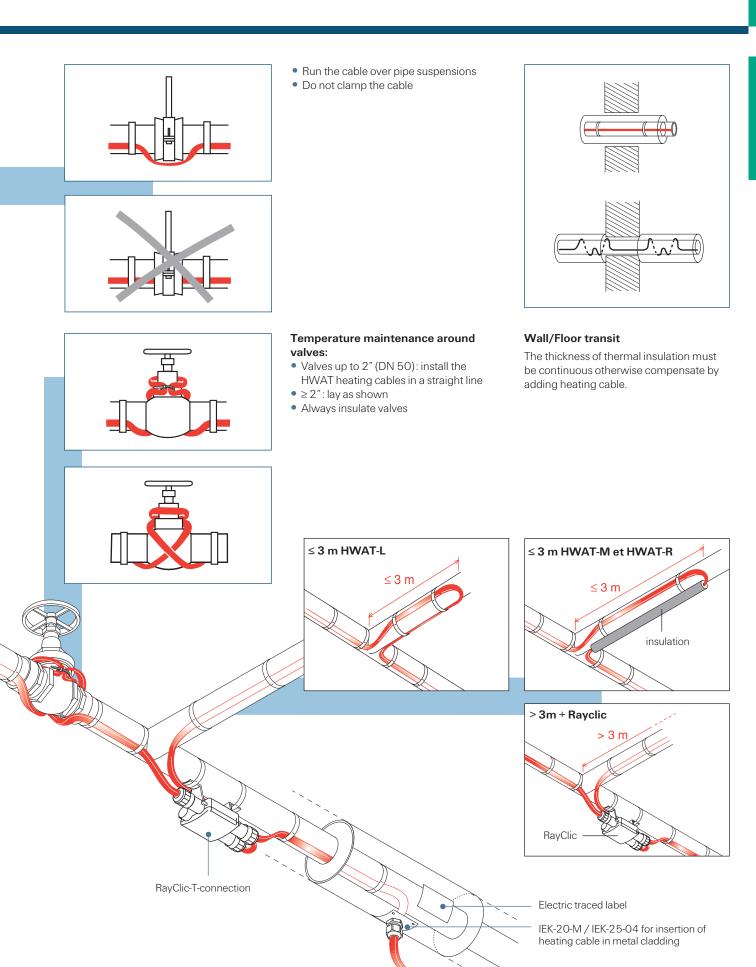

- * Two- or four-pole electrical protection by circuit breaker may be needed for local circumstances, standards and regulations
- ** The earth wire of shielded RS-485 cable needs to be connected to the BMS (-) terminal of each HWAT-ECO in the Master / Slave network.

Hot water temperature maintenance

Frozen pipes can be a costly problem. When pipes are exposed to subzero temperatures they can burst, leading to considerable damage and disruption. The Raychem frost protection system for pipes provides an efficient solution. The selfregulating heating cable, combined with an adequate insulation, prevents water pipes, fire mains, sprinkler systems and fuel oil lines from freezing.

Thermostat with line or ambient temperature sensor

Residual current device (30 mA) Circuit-breaker (C type)

Junction box (JB16-02)

T-Connection (RayClic-T-O2) (Not for FS-C-2X)

Power connection (RayClic-CE-O2) (Not for FS-C-2X)

Electrical traced label (LAB-I-01)

Frost protection heating cable (FS-A-2X, FS-B-2X or FS-C-2X)

End seal (RayClic-E-02) (Not for FS-C-2X)

Easy to install

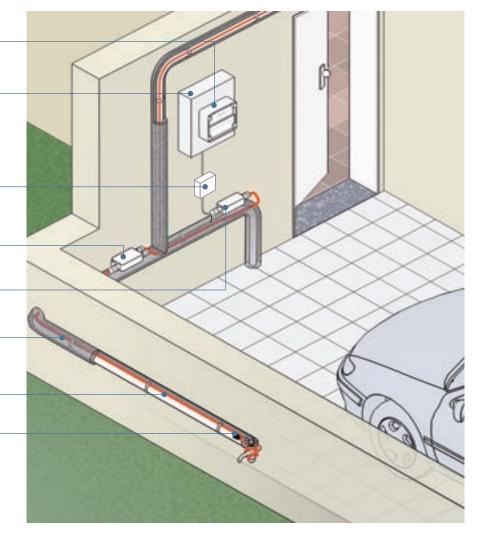

The heating cable is simply fixed on the pipe – under the thermal insulation. Connections are quickly made with the fast RayClic connectors.

Durable and reliable

The cable's large copper conductors make it a reliable solution and its speciallyformulated outer jacket protect it from severe environmental conditions.

Low power consumption

Smart RAYSTAT control units calculate a duty-cycle proportional to the expected minimum temperature. Where a simple ambient thermostat would energize the heating cable for 100%, the "smart" controllers would energise for a fraction of the time, resulting in significant extra savings.

Design guide, control units and accessories

1. Heating cable selection

Application						
Frost protection for pipework at max. 65°C operating temperature						
FS-A-2X	10 W/m at 5°C					
FS-B-2X	26 W/m at 5°C					

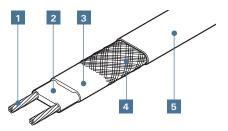

Frost protection for pipework at max. 95°C operating temperature and temperature maintenance for metal waste pipes with fatty waste water
FS-C-2X 31 W/m at 5°C

3 I VV/m at 5 °C
22 W/m at 40°C

2. Composition of the FS-A/B/C-2X heating cable

1

2

Copper conductor (1.2 mm²)

Self-regulating heating element

3 Modified polyolefin insulation (FS-C-2X: Fluoropolymer)

4 Protective tinned copper braid

5 Modified polyolefin protective jacket

3. Insulation selection

Frost protection down to -20° C.

	Pipe dia	meter											
Insulation	mm	15	22	28	35	42	54	67	76	108	125	150	200
thicknesses	Inches	1/2″	3/4″	1″	5/4″	11/2″	2″	21/2″	3″	4″	5″	6″	8″
10 mm		FS -A -2X	FS -B -2X	FS -B -2X	FS- B -2X	FS- B -2X	FS- B -2X	FS -B -2X					
15 mm		FS -A -2X	FS -A -2X	FS -A -2X	FS- B -2X								
20 mm		FS -A -2X	FS- B -2X										
25 mm		FS -A -2X	FS- A -2X	FS- B -2X									
30 mm		FS -A -2X	FS- A -2X	FS -A -2X	FS- B -2X								
40 mm		FS -A -2X	FS -A -2X	FS -A -2X	FS- A -2X	FS- A -2X	FS- A -2X	FS- A -2X	FS -A -2X	FS- B -2X	FS- B -2X	FS- B -2X	FS- B -2X
50 mm		FS -A -2X	FS -A -2X	FS- A -2X	FS -A -2X	FS- A -2X	FS- B -2X	FS- B -2X	FS- B -2X				

Frost protection cables FS-A-2X and FS-B-2X are suitable for any pipe material (copper, threaded pipes, stainless steel pipes, plastic pipes and composite metal pipes without restriction).

For plastic pipes, please use aluminium adhesive tape ATE-180. The frost protection cable should be covered along its entire length. Heat insulation $\lambda = 0.035$ W/(m.K) or better.

Important note: frost protection heating cables with fluorpolymer protective jacket (e.g. type BTV2-CT) must be used for solvent-containing, mixed and/or bitumen-coated heat insulation.

40°C temperature maintenance on pipelines for fatty waste water

	Pipe diar	neter (mn	n)					
Insulation	42	54	67	76	108	125	150	200
thicknesses	11/2″	2″	21/2″	3″	4″	5″	6″	8″
30 mm	FS- C -2X							
40 mm	FS- C -2X	FS- C -2X	FS- C -2X					
50 mm	FS- C -2X	FS- C -2X	FS- C -2X	FS- C -2X				
60 mm	FS- C -2X							

Min. ambient temperature -10° C. Heat insulation $\lambda = 0.035$ W/(m.K) or better.

Cable type FS-C-2X should only be used for pipework with a minimum continuous temperature resistance of 90°C. A line-sensing control thermostat (type AT-TS-14 or RAYSTAT-CONTROL-10) must be used on plastic pipework (setting approx. 40°C).

4. Cable length	Cable loops inste	The heating cable should be installed in a straight line on the pipework. Cable loops instead of T-connections can be made on short stubs (up to approx. 3 m)								
	 + approx. 0.3 m per connection + approx. 1.0 m per T-connection + approx. 1.2 m per 4-way connection Additional cable required for increased heat sinks at valves from 2" and for uninsulated pip supports (approx. 1 m) = required heating cable length 									
5. Electrical protection	 The total length of heating cable determines the number and size of the fuses Residual current device (rcd): 30 mA required, max. 500 m heating cable per rcd Installation according to local regulations The power connections must be carried out by an approved electrical installer Use C type circuit-breakers

- *** Optional

Frost protection for gutters and downpipes

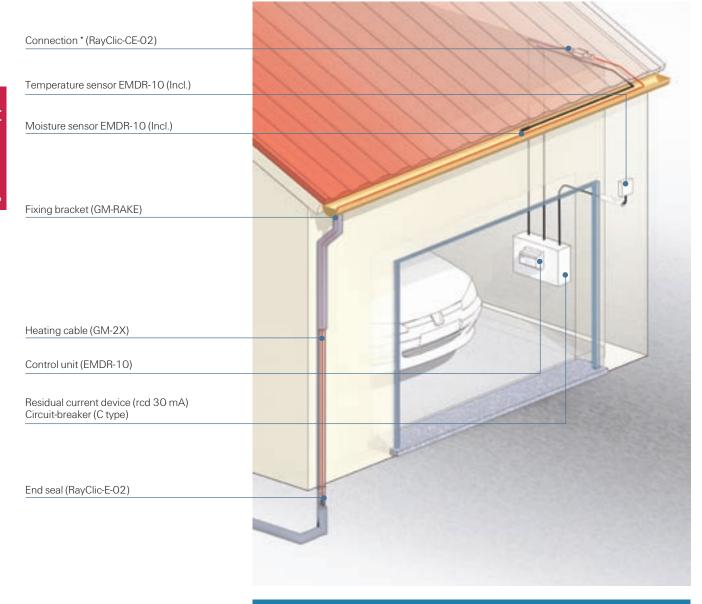

Melting and refreezing of ice can damage roofs and gutters. Heavy icicles may fall and cause injury. Standing water can leak through interior walls and furnishings. The Raychem self-regulating snow melting system maintains water flow in gutters and drain pipes and provides a path whereby melting ice and snow can drain safely off the roof, along the gutter and down the drain pipe.

Practical to install

The self-regulating cable can be closely spaced in gutters without the risk for overheating or burn-outs. There is a cable for each type of roof material.

Economical to operate

The self-regulating effect saves energy by automatically increasing its heat output in icy water and decreasing its output in dry air. The smart EMDR-10 control unit only switches the heating cable on when necessary: after the detection of both low temperature and moisture.

Do not install RayClic immersed in water. <u>*Do not burry RayClic in the ground neither in the gutter.*</u>

Design guide, control units and accessories

1. Heating cable selection

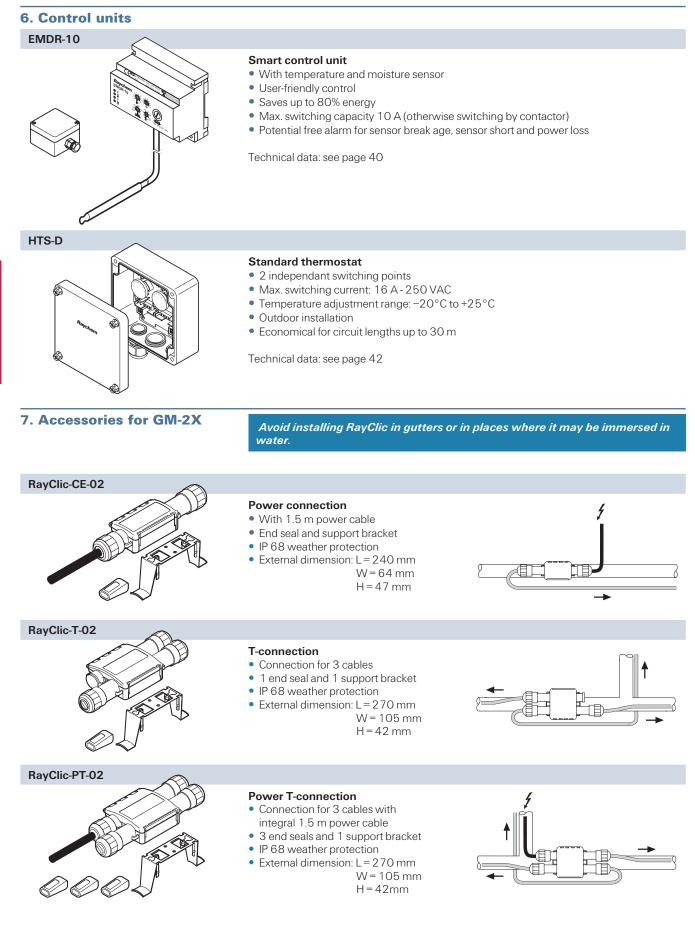

GM-2X Self-regulating heating cable for gutters, drain pipes and roof surfaces: • 36 W/m in iced water and 18 W/m in air at 0°C

2. Composition of the GM-2	X heating cable		
	 Copper conductor (1.2 mm² Self-regulating heating elemination Insulation made of modified Tinned copper braid Protective jacket made of micropolyolefin (UV-resistant) Technical data: see page 53 	ent polyolefin	Important note: When laying cables on asphalt, bitumen, roofing felt, etc., a cable with a special fluoropolymer jacket (8BTV- 2-CT) must be used.
3. Cable length	 The heating cable should be in The cable lengths should be ac and the gutters More than one cable should be Gutter length + drainpipe length + 1 m per connection + 1 m in the soil (frost line) = required heating cable length 	ljusted accordi	ng to the geographical situation
4. Electrical protection		30 mA required egulations be carried out b r cuit is based	
		GM-2X	8BTV-2-CT
		25 m	25 m
		10 m	40 m
		50 m	50 m
		30 m	60 m
	20 A 8	30 m	80 m

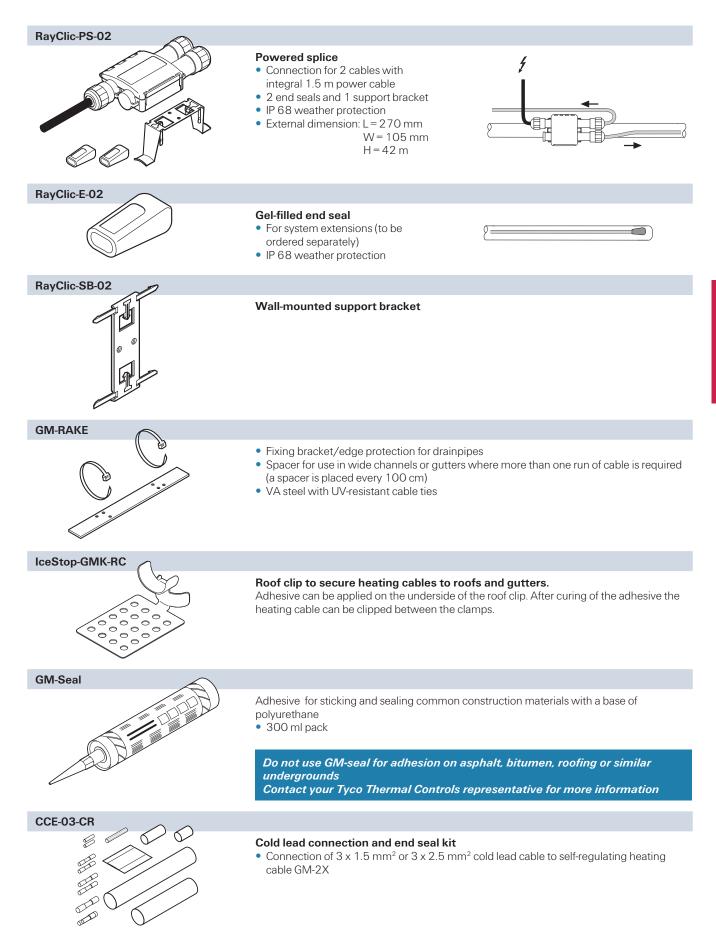

5. Testing of the installation See page 50

Frost protection for gutters and downpipes

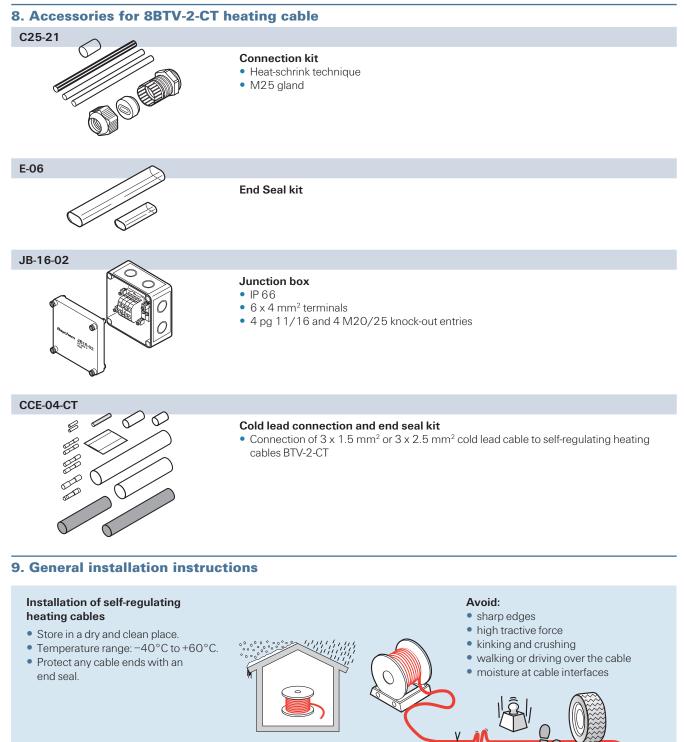

Frost protection for gutters and downpipes

Frost protection for jutters and downpipe

Frost protection for gutters and downpipes

Frost protection for gutters and downpipes

10. Special installation instructions

Do not install RayClic immersed in water. Do not burry RayClic in the ground neither in the gutter.

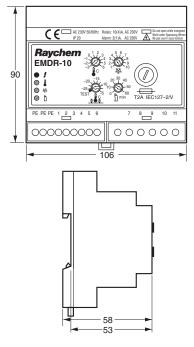

In the drainpipe: always put the cable as far as the frost-free area (approx. 1m deep)

Frost protection for gutters and downpipes

Snow melting for ramps, access ways, and footpaths

Ice and snow on paths, loading bays, driveways, ramps, stairs and other access ways, can present a major problem causing accidents and delays. To help prevent this liability, Raychem provides a complete range of ground heating solutions to prevent snow and ice formation.

The Raychem range of products has

been specifically designed to meet the requirements of commercial, industrial, and residential applications. Whether in concrete, sand, or asphalt, a Raychem system exists to provide a fast, reliable, and easy- to- install solution.

Each Raychem heating solution is

complete with a Smart control and monitoring unit, providing useful user data and excellent energy efficient performance. The multi-sensor control and monitoring device (VIA-DU-20) is compatible with all ramp snow melting solutions.

Application in concrete

Electrical underfloor heating

Comfort is everything, especially in the home. With Raychem's smart electrical underfloor heating, you can offer a beautiful warm floor; hassle free to your customers!

5 good reasons to choose Raychem smart underfloor heating

- 1. Comfortable and safe
- 2. Hassle free installation and maintenance free
- 3. Energy-efficient and cost saving
- 4. Can be installed under all floor coverings
- 5. Triple warranty

The Raychem Underfloor heating range comprises:

- The innovative and unique self- regulating floor heating cable, T2Red.
- The energy-saving underfloor heating system T2Red with T2Reflecta. This system combines the self-regulating heating cable T2Red with T2Reflecta, the grooved, thermally insulated, aluminium-covered plate.
- The ultra thin heating mat (two power options available), T2Quicknet.
- The robust, flexible, pre-terminated (dual wire, and screened) cable system, T2Blue.
- "Smart" thermostats which offer zoned, programmable heating control, a requirement of Part L of the building regulations.
- A complete range of installation accessories and components including: - Floor primers
- Adhesives
- Fixing accessories

Smart services for design and specification

Raychem offers a comprehensive design and specification service for consultants and architects, free of charge.

Using bespoke floor heating design software, we provide:

- Optimised installation plans for the designer and installer in 2 & 3 dimensional views.
- Zone by zone product data including heat output per room and per m² in the room.
- Detailed bill of materials, optimised by the software to minimise waste.

With a design proposal complete, we provide specification support to ensure quality procurement.

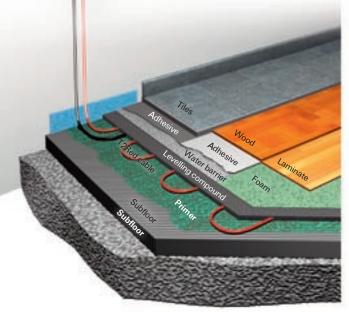

Support tools on the web	Design and specification tools are available at:		
	www.raychemfloorheating.com		
	Energy consumption calculator		
	 Product selection guide 		
	• A "We design it for you" e-request service - building material selector.		
Local support from an exper	rt team		
	The Raychem systems and services are supported by a dedicated specifications team. We can provide sound design advice specific to your project needs.		
	We are also available to:		
	 Support consultants and architects at early design/concept stage and provide floor heating options. 		
	 Visit the project site to survey the requirements and make recommendations for the consultant, client, and contractor. 		
	 Provide contact details of local suppliers and installers of Raychem floor heating systems. 		
Safety and reliability	Raychem is synonymous with quality, reliability, and exceptional performance. Our triple warranty is our promise.		
	12 Year Product Warranty.		
2-YEAR WARRANTY	 Low electrical and magnetic fields. The entire portfolio benefits from the two-core heating cable design. Peace of mind for our customers. 		
Raychem Triple warranty	 PVC Free products. Raychem heating systems are completely free from PVC. 		
RENE FIELDS	For more information: ask for the Floorheating handbook or go to www.raychemfloorheating.com

Electrical underfloor heating

T2Red: the intelligent underfloor heating system

Senses other sources of heat and adjusts its heat output accordingly.

- Makes wet floors dry faster.
- No risk of overheating.
- Can be installed on all sub floors (plastic, concrete, wood, carpets) - in dry or wet areas.
 - Can be adapted to all room sizes.

T2Red with T2Reflecta: the energy-efficient solution

- The T2Reflecta system combines the self-regulating T2Red heating cable with the pre-grooved T2Reflecta; a thermally insulated, aluminium-covered plate.
- Provides extra energy savings of 20% or more
- Can be adapted to all room sizes and be installed on most sub floors.
- First choice for wooden or laminate floors in dry areas.

• Automatically adjusts its heat output dependent on ambient floor temperature.

Laminate or wood

Foan

12Red he

T2Reflecta Plat

T2QuickNet: the ideal solution for renovation

- The thin T2QuickNet mat is the ideal solution for renovation especially for tile floors. The ultra-thin (3 mm) mat is laid directly in the filler.
- It can be installed on all sub floors which are sufficiently insulated and conforming to applicable building regulations.

Tile adhesive

Prim

• T2QuickNet exists in two versions: a very popular 90 W/m² version and a 160 W/m² version when more output is required.

Electrical floor heating systems

General installation instructions

Checklist for problem-free installation and safe operation

Typical installation schedule for hot water temperature maintenance

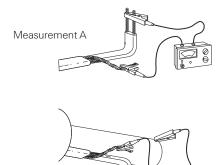

General order of events

- O The system is designed and the installation planned
- O The pipework is pressure tested or otherwise checked for leaks
- O The HWAT-L/M/R cable is tested and then installed on the designated pipes
- O The components are installed and each circuit is tested
- The correct thermal insulation is applied, without delay, labelled and the system test repeated
- O The supply voltage cables and circuit breakers are installed to each circuit
- O The system is commissioned (see "System start-up" below)

Circuit protection, testing and operation for all systems

Circuit protection

- O Supply voltage 230 VAC, 50 Hz
- O The required protective measures of the relevant regulations must be complied with.
- O C type circuit breaker (anti-surge fuse)
- Residual current device (rcd 30 mA) required. Maximum approx. 500 m of self-regulating heating cable can be monitored per rcd

Measurement B

Testing

- O Visual inspection for damage and fault-free installation of the accessories
- O Proper installation of the system
- O Heating cable affixed to all necessary pipes
- O No mechanical damage to heating cable (e.g. cuts, cracks, etc.)
- O No thermal damage
- O Proper connection of all components including power supplies
- Insulation resistance measurement when heating cable is received and before and after installation of the thermal insulation. The test voltage should be 2500 VAC, but it must not be lower than 500 VAC. The insulation resistance, irrespective of the cable length, must not be less than 100 Mohms.

If the resistance falls below this value, the source of the fault must be investigated, eliminated, and re-tested.

- Measurement A: Phase and neutral to the braid
- Measurement B: Braid to the pipework
- O After switching on, the cable ends must be warm after 5 to 10 minutes

Instructions for the placing of the heat insulation

- O For problem-free operation of the self-regulating heating cables, the material quality and thickness of the thermal insulation should be in accordance with the design parameters, and this insulation must be installed correctly
- O All parts of the pipework, including valves, wall transit points, etc. must be fully insulated

Operation / System start-up

O 1) For small installations, turn on the circuit breakers and preferably leave the system overnight for the water to warm up and stabilise

2) For bigger installations or for a faster start-up, first turn on the main water heater and open the outlet/tap at the end of the pipework run until the water feels warm and then turn on the circuit breakers

If the piping system is closed, such as by pressure-reducing valves or isolation valves, you must provide some method of pressure relief to allow for thermal expansion of the water during heat-up

- O Under normal operating conditions, the heating cables are maintenance-free. Tyco Thermal Controls recommend that the insulation resistance should be checked periodically and compared with the original values. If the reading falls below the minimum value (100 Mohms) determine the cause and rectify before re-use
- O The specified maximum ambient and operating temperatures should not be exceeded
- O In the event of repair to the pipework, the heating cable must be protected against damage. Correct function of the electrical protection system should be maintained. To prevent shock or personal injury, turn off the power at the circuit breaker before testing or working on the heating cable or piping

- O Following the completion of the repair work, the circuit should once again be tested (see above)
- O All the important parts of the controls, thermostats, etc. must be checked for correct operation once a year, normally in the autumn

Only for hot water temperature maintenance

Newly installed heating cables have lower power at start-up of the installation. The nominal power will be reached after approximately 4 weeks of continuous operation

O The maintenance temperature should be 5°C to 10°C below the hot water temperature in the boiler

Standard assembly times

The actual assembly times achieved may deviate according to the conditions on site.

Pipework

Assembly of heating cable on pipes including fastening, standard installation: 25 m/hour

Connection system

(electrical connection)	
RayClic-CE-02	2 min/pc.
RayClic-S-02/RayClic-PS-02	4 min/pc.
RayClic-T-02/RayClic-PT-02	6 min/pc.
RayClic-X-02	8 min/pc.
RayClic-E-02	1 min/pc.

Heat-shrink connection system

(electrical connection)	
C25-21	15 min/pc.
E-06	5 min/pc.
CE20-01	20 min/pc.

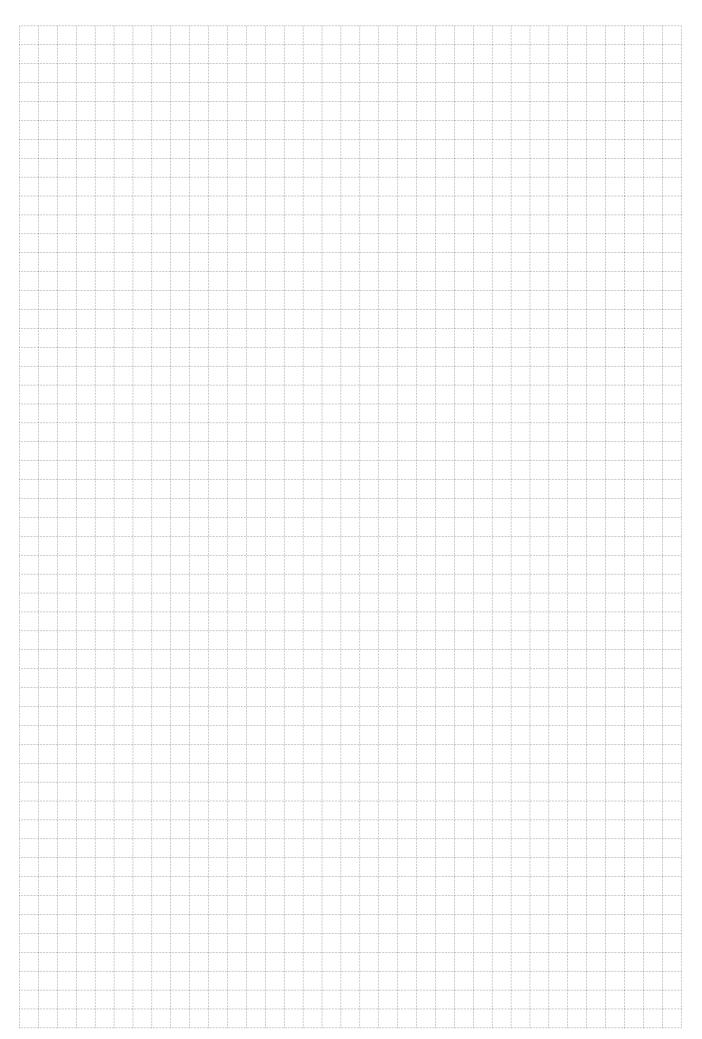

Other

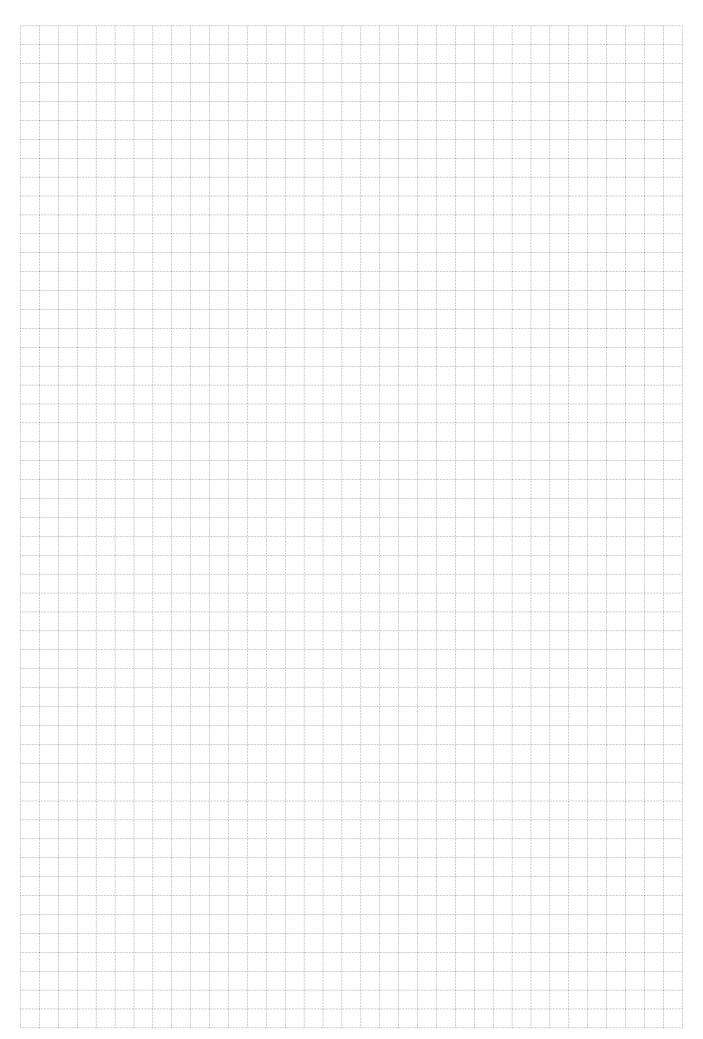

Testing, visual inspection,		
insulation resistance measurement (2x)	10 min/heating circuit	
Connecting the heating circuit

General installation instructions

Trouble shooting guide

Fault	Possible causes	Measures
Circuit-breaker trips:	Circuit breaker wrong type: e.g. type B instead of C:	Change to C Type
	Circuit breaker undersized	If the power supply cable permits, install a larger circuit breaker
	Circuit too long	Split the circuit on 2 circuit breakers
	Short-circuit/earth fault	Eliminate short-circuit/earth fault (cable ends should not be twisted)
	Circuit breaker faulty	Replace faulty circuit breaker
	No end seal	Install end seal
	Conductor (or cable) twisted	Untwist and install end seal
RCD residual current device trips:	More than 500 m of frost protection	Install additional rcd residual current
	heating cable installed per rcd	device
	Earth fault at connection or in end seal	Rectify earth fault
	Cable damaged	Repair cable where damaged
	Moisture in the junction box	Eliminate moisture
Pipeline does not become warm -	Circuit-breaker has tripped	See section circuit breaker
Heating cable cold:	Residual current device has tripped	See section residual current device
	No mains voltage	Switch on
	Cable or cold lead not connected	Connect cable or cold lead
	Cable not inserted correctly in	Insert cable according to installation
	connection system or end seal	instructions (fully insert cable)
Water temperature is not maintained	No insulation	Insulation according to tables in
but the cable gives high output:	Insulation thickness insufficient	design guides
	Insulation wet	Dry insulation
	Cold water is running from the boiler	Test boiler temperature
	Cold water is pumping through mixer tap into the hot water pipe. Insulation according to tables in design guides.	Test the mixer tap

Tyco Thermal Controls, a part of Tyco International, is a global supplier of complete systems and related services for heat-tracing, underfloor heating, snow melting & de-icing, leak detection, temperature measurement, specialty heating, and fire performance wiring products. The company's range of products and services include consultation, design, installation, and maintenance solutions for applications in the industrial, commercial and residential markets. Employing thousands of people in 50 countries, we offer products and services on a global scale under the renowned brands such as Raychem, T2, HEW-THERM, Pyrotenax, DigiTrace, Isopad, TraceTek and Tracer.

Raychem 72 HEW-THERM TRACER DigiTrace -Sopod- TraceTek. TRACER

For further information about Tyco Thermal Controls go to www.tycothermal.com

A proven track record

Over the past 35 years, just under 1 billion feet - 305 million metres of Raychem cable were installed. This means if all the supplied heat tracing cables were in a straight trace towards the moon, the cable would be 80% of the way there! Some of our references: Royal Opera House London (hot water temperature maintenance system), Eiffel Tower Paris (frost protection), Houses of Parliament (fire performance cables), Four Seasons Hotel Hampshire (Underfloor heating), Terminal 5 Heathrow Airport (hot water temperature maintenance, frost protection, walkway heating, underfloor heating).

Member of the European Radiant Floor Heating Association e.v.

Our products satisfy the requirements of the relevant European Directives. This documentation was supplied to you by:
